

Assignment No 11

Steps to install Hadoop:

Step 1) mkdir words

Step 2) Download hadoop-core-1.2.1.jar, which is used to compile and execute the MapReduce program. Visit the following

link

<http://mvnrepository.com/artifact/org.apache.hadoop/hadoop-core/1.2.1>

Step 3) Put that downloaded jar file into words folder.

Step 4) Implement WordCount.java program.

Step 5) Create input1.txt on home directory with some random text

Step 6) go on words path then compile

```
javac -classpath /home/vijay/words/hadoop-core-1.2.1.jar /home/vijay/words/WordCount.java
```

Step 7) jar -cvf words.jar -c words/ .

Step 8) cd .. then use following commands

```
hadoop fs -mkdir /input
```

```
hadoop fs -put input1.txt /input
```

```
hadoop fs -ls /input
```

```
hadoop jar /home/vijay/words/words12.jar WordCount /input/input1.txt /out321
```

```
hadoop fs -ls /out321
```

```
hadoop fs -cat /out321/part-r-000000
```

(Otherwise check in Browsing HDFS -> Utilities -> Browse the file System -> /)

Java Code for word count:

```
import java.io.IOException;
import java.util.*;

import org.apache.hadoop.fs.*;
import org.apache.hadoop.conf.*;
import org.apache.hadoop.io.*;
import org.apache.hadoop.mapreduce.*;
import org.apache.hadoop.mapreduce.lib.input.*;
import org.apache.hadoop.mapreduce.lib.output.*;
import org.apache.hadoop.util.*;

public class WordCount extends Configured implements Tool
{
    public static void main(String args[]) throws Exception
    {
        int res = ToolRunner.run(new WordCount(), args);
        System.exit(res);
    }
    public int run(String[] args) throws Exception
    {
        Path inputPath = new Path(args[0]);
        Path outputPath = new Path(args[1]);

        Configuration conf = getConf();
        Job job = new Job(conf, this.getClass().toString());
        job.setJarByClass(WordCount.class);

        FileInputFormat.setInputPaths(job, inputPath);
        FileOutputFormat.setOutputPath(job, outputPath);

        job.setJobName("WordCount");

        job.setMapperClass(Map.class);
        job.setCombinerClass(Reduce.class);
```

```

        job.setReducerClass(Reduce.class);
        job.setMapOutputKeyClass(Text.class);
        job.setMapOutputValueClass(IntWritable.class);
        job.setOutputKeyClass(Text.class);
        job.setOutputValueClass(IntWritable.class);
        job.setInputFormatClass(TextInputFormat.class);
        job.setOutputFormatClass(TextOutputFormat.class);

        return job.waitForCompletion(true) ? 0 : 1;
    }

    public static class Map extends Mapper<LongWritable, Text, Text,
IntWritable>
    {
        private final static IntWritable one = new IntWritable(1);
        private Text word = new Text();

        public void map(LongWritable key, Text value, Mapper.Context
context) throws IOException, InterruptedException
        {
            String line = value.toString();
            StringTokenizer tokenizer = new StringTokenizer(line);
            while (tokenizer.hasMoreTokens())
            {
                word.set(tokenizer.nextToken());
                context.write(word, one);
            }
        }
    }

    public static class Reduce extends Reducer<Text, IntWritable, Text,
IntWritable>
    {
        public void reduce(Text key, Iterable<IntWritable> values, Context
context) throws IOException, InterruptedException
        {

```

```

        int sum = 0;
        for(IntWritable value : values)
        {
            sum += value.get();
        }
        context.write(key, new IntWritable(sum));
    }
}
}

```

Output:

```

siva@siva-desktop:~$ hadoop fs -ls /test/output
